B.S. in Environmental Justice and Social Change

The trauma caused by the world’s most pressing environmental issues have social justice ramifications, and the world needs environmental stewards to create solutions. The B.S. in Environmental Justice and Social Change prepares students to recognize the interconnectedness of social and biophysical factors and transfer that knowledge to careers in social justice. In this program, students investigate where inequalities exist and are enabled around the world.

Courses in the program tackle global issues where people are susceptible to climate vulnerability, adaptation; environmental health; energy justice; agricultural change; food security; community revitalization; conservation and access to natural areas; conflict mediation, advocacy campaigns, public opinion; and government and non-government intervention. Students will learn to be data-driven to provide solutions to global issues of human inequity and environmental injustice.
