B.S. in Environmental Geospatial Technologies

Gain professional experience with a STEM degree that prepares you for high-tech careers in government, business, consulting, and environmental non-profit organizations.

Geospatial Technology is an emerging field of study that includes Geographic Information System (GIS), Remote Sensing (RS) and Global Positioning Systems (GPS). Geospatial technology enables us to acquire data that is referenced to the earth and use it for analysis, modeling, simulations and visualization.

As an Environmental Geospatial Technologies student, students learn the application of these technologies in the context of solving environmental problems and finding a fulfilling career.

This undergraduate program focuses on professional GIS and applied GIS, which are vital for students looking to obtain a job right out of college. Unity’s program is based on the U.S. Department of Labor’s Geospatial Technology Competency Model, so you’ll have a clear path to your career as soon as you graduate.
